

VenQore

Launch Plan & Product Roadmap

24-hour sprint to go live · What to build after launch · The complete product vision

PART 1	The 24-Hour Sprint — minimum to go live on Monday
PART 2	Post-Launch Additions — first 30 days after going live
PART 3	The Missing Features — trial, billing & subscription UX
PART 4	The Full Product Roadmap — everything, phased correctly

Before We Start — The Honest Picture

You have 24 hours. You have a working ERP system with great core features. You also have real gaps in the subscription and billing experience. Here is the rule that matters today:

■ **The Only Rule For Today**

A customer must be able to sign up, pay, get into their store, use the POS and inventory, and not lose their data. Everything else — the trial countdown, the upgrade prompts, the beautiful dashboards — can be added AFTER your first real customer is paying. Do not let perfect stop you from launching.

What 'Working Enough to Sell' Actually Means

Feature	What it means	Priority today
Sign up & pay	Lemon Squeezy handles this — if webhook fires and store provisions, it works	■ Must work
Get into the store	Login → hub → store dashboard loads	■ Must work
Use POS	Search product, make sale, see receipt	■ Must work
Inventory	Add product, see stock, basic reports	■ Must work
Trial countdown	Showing days left in a banner	■■ Nice to have
Upgrade prompts	Pop-up when trial nears expiry	■■ Can add Day 2
Beautiful HQ dashboard	Charts, MRR graphs	■ Not needed today
Staff invite polish	Email templates look perfect	■ Not needed today

1 The 24-Hour Sprint

Do these tasks in order. Stop only when all are ticked.

■ Do These In Order

Each step depends on the previous one. Do not jump ahead. If step 3 fails, fix it before moving to step 4.

Morning Block (Hours 1–4) — Get It Running Locally

1	Full database backup of father's shop Run: <code>mysqldump -u root -p venqore_db > backup_\$(date +%Y%m%d_%H%M%S).sql</code> — store it safely before touching anything	20 min	☐
2	Verify all new migrations run cleanly on a fresh local database Run: <code>php artisan migrate:fresh --seed</code> — watch for any errors. Fix every error before continuing.	30 min	☐
3	Test the complete sign-up → store creation flow locally Register a new email, create a store, complete the wizard, land on dashboard. If this breaks, nothing else matters.	30 min	☐
4	Test the Lemon Squeezy webhook locally Use the Lemon Squeezy CLI or a test payload to simulate a payment. Verify the store is auto-provisioned and welcome email sends.	45 min	☐
5	Test one complete sale in POS Add a product, open POS, make a sale, verify stock decreased and journal entry was created.	20 min	☐
6	Test data isolation — two stores, no bleed Create Store A and Store B. Add data to each. Log into Store B and confirm Store A data is invisible.	20 min	☐

Afternoon Block (Hours 4–8) — Deploy to Hostinger

■ Before You Deploy

Make sure `APP_DEBUG=false` in your production `.env`. If this is true in production, every error shows your full code to users.

7	Backup production database (father's shop) one more time Same backup command, different filename. You want a backup from RIGHT before deploy.	5 min	☐
8	Upload new codebase to Hostinger via Git or FTP Use git pull if you have git set up on Hostinger, or upload the zip. Do NOT overwrite the <code>.env</code> file.	30 min	☐

9	Run migrations on production SSH into Hostinger: <code>php artisan migrate --force</code> — watch each migration carefully. If one fails, stop immediately.	20 min	■
10	Run TenantZeroSeeder on production <code>php artisan db:seed --class=TenantZeroSeeder</code> — this assigns all existing father's shop data to Tenant 1. Critical.	10 min	■
11	Clear all caches <code>php artisan config:cache && php artisan route:cache && php artisan view:cache && php artisan optimize</code>	5 min	■
12	Test the live site — sign up as a new user Use a real email you control. Go through full sign-up → store creation → dashboard. Confirm welcome email arrives.	20 min	■
13	Test father's shop data is intact Log into the father's shop account. Check products, past sales, reports all show correctly. None of it should be gone.	15 min	■

Evening Block (Hours 8–12) — AppSumo Prep

14	Set up venqore.com landing page (minimum viable) Headline + 3 bullet points + Loom video link + pricing cards + 'Start Free Trial' button. Nothing else. Ship it.	60 min	■
15	Set up demo.venqore.com with seeded data Create a demo tenant manually. Seed it with realistic products, a few sales, and reports with data. Make demo credentials publicly visible.	45 min	■
16	Configure Lemon Squeezy production products Create Starter (\$19/mo), Growth (\$39/mo), Business (\$79/mo) products in Lemon Squeezy. Set the webhook URL to your production server.	30 min	■
17	Do one real end-to-end test with a real card Use your own card. Buy the Starter plan. Confirm: webhook fires, store is created, welcome email arrives, you can log in.	20 min	■
18	Final check: error logs are clean Check <code>storage/logs/laravel-today.log</code> for any ERROR or CRITICAL entries. Fix anything you find.	20 min	■

■ If All 18 Tasks Are Done

You are live. Post your AppSumo application. Share the link on Reddit (r/entrepreneur, r/SaaS). Tell 5 people who own shops. The product is good enough. Get the first customer.

2

Post-Launch Additions — First 30 Days

Add these after your first customer signs up. Not before.

These are real gaps that need to be filled but will not stop your first customer from using the product. Build them in the order listed.

Week 1 — Days 1 to 7

■ Trial status banner in store dashboard	A simple coloured bar at the top of the store showing: '12 days left on your trial. Upgrade now →'. Green when plenty of time, orange under 7 days, red under 3 days.	1 day
■ Trial expiry page	When trial ends, instead of a random error, show a clean page: 'Your trial has ended. Add your payment details to continue.' with a direct link to Lemon Squeezy checkout.	4 hours
■ Fix the admin panel — remove developer-only sections	Remove database health checks, last backup time, raw queue stats from the owner dashboard. Replace with business metrics: today's sales, active staff, low stock count.	1 day
■ Welcome email polish	Make sure the welcome email looks professional, has the correct store URL, and contains clear instructions on how to add the first product.	3 hours

Week 2 — Days 8 to 14

■ 7-day trial warning email	Automated email sent when trial has 7 days left. Subject: 'Your VenQore trial ends in 7 days'. Plain, clear, with one button: 'Add Payment Method'.	3 hours
■ 2-day trial warning email	Same as above but with more urgency. Sent when 2 days remain.	2 hours
■ Payment failed page and email	When a card payment fails, the owner should see a clear page inside the app saying what happened and how to fix it. Plus an automatic email.	4 hours
■ Plan limit upgrade prompts	When a Starter user tries to add their 1,001st product, instead of a generic error, show a modal: 'You have reached the Starter plan limit. Upgrade to Growth for unlimited products.'	1 day

Week 3–4 — Days 15 to 30

■ Subscription status page inside the store	A clean page at /app/{slug}/billing showing: current plan, next billing date, amount, and a 'Manage Billing' button that opens the Lemon Squeezy customer portal.	1 day
■ AppSumo code redemption page	A page at /redeem where AppSumo buyers paste their code. Clean, simple, shows their plan after redemption.	4 hours

■ Store switcher polish	The dropdown that shows when a user has 2+ stores. Make it fast, clean, shows store name and role.	4 hours
■ Support contact link	A 'Get Help' link in the store that opens an email to your support address or a simple form. Before you have a full ticket system, even a mailto: link is enough.	1 hour

3 The Missing Billing & Trial Experience

The complete design of everything a user sees related to their subscription

Right now a user has no idea how many days are left on their trial, what happens when it ends, or how to upgrade. Here is exactly what needs to be built — the full design.

The Trial Status Banner

A bar that sits at the very top of every page inside the store dashboard. It is the first thing the user sees every time they log in. It must be:

Days Remaining	Colour	Message	Button
14 to 8 days	Blue bar	'You are on a free trial. 12 days remaining.'	Upgrade Now →
7 to 4 days	Orange bar	'Your trial ends in 6 days. Add payment to keep access.'	Add Card →
3 to 1 days	Red bar	'Your trial ends tomorrow. Act now to avoid losing access.'	Upgrade Now →
Expired	Full-page block	Trial Expired page — cannot dismiss, cannot bypass	Upgrade →

The Trial Expired Page

This is a full-screen page that replaces the dashboard when the trial ends. The user cannot bypass it. It must contain exactly these elements:

- Your VenQore trial has ended — displayed clearly at the top
- Your data is safe — we have kept everything. Add a payment method to continue.
- The plan they were on with the monthly price
- A single large button: 'Continue with Starter — \$19/month'
- A smaller link: 'See all plans' that shows the pricing comparison
- A reassurance line: 'Cancel anytime. No contracts.'
- Contact support link at the bottom

The Billing Page Inside the Store

Accessible at /app/{slug}/billing — only the Owner can see this. It shows the owner everything about their subscription in one place.

Section	Content
Current Plan	Plan name (Starter / Growth / Business / Lifetime), price per month
Status	Active / Trial (X days left) / Suspended / Cancelled
Next Payment	Date and amount — pulled from Lemon Squeezy
Payment Method	Last 4 digits of card on file — Lemon Squeezy shows this

Manage Billing Button	Opens Lemon Squeezy customer portal — they handle everything there
Upgrade/Downgrade	Links to the other plan checkout pages
Usage vs Limits	Products used: 43/1,000 Staff: 2/3 Locations: 1/1
LTD Info (if applicable)	Shows AppSumo code redeemed, hosting end date, what happens after

Email Sequences — The Automated Lifecycle

These emails run automatically in the background. You set them up once and they handle every customer forever.

Email	Trigger	Subject Line
Welcome	Immediately after store is provisioned	Your VenQore store is ready — here's how to start
Trial Day 7	7 days before trial_ends_at	Your free trial ends in 7 days
Trial Day 2	2 days before trial_ends_at	48 hours left — keep your store running
Trial Expired	When status changes to suspended	Your trial has ended — your data is safe
Payment Failed	Lemon Squeezy payment_failed webhook	We couldn't process your payment
Payment Recovered	Lemon Squeezy payment_recovered webhook	Payment successful — you're back!
Plan Upgraded	Lemon Squeezy subscription_updated webhook	You're now on the Growth plan
Cancellation	Lemon Squeezy subscription_cancelled webhook	We're sorry to see you go
Data Deletion Warning	60 days after cancellation	Your VenQore data will be deleted in 30 days

4 The Complete Product Roadmap

Everything that needs to be built, in the right order, phased by priority

This is the full picture. Everything you identified as missing, everything the architecture requires, and everything needed to reach AppSumo and beyond. Organised into phases so you always know what to build next.

Phase 0 — Live Today

24 hours

■ Sign up → pay → store provisioned automatically	Core	■ Done or do today
■ Login → hub → store dashboard	Core	■ Done or do today
■ POS: search, sell, receipt	Core	■ Done or do today
■ Inventory: add product, adjust stock	Core	■ Done or do today
■ Data isolation: stores cannot see each other	Security	■ Done or do today
■ venqore.com landing page (minimum)	Marketing	Do today
■ demo.venqore.com with seeded data	Marketing	Do today
■ Lemon Squeezy production configured	Billing	Do today

Phase 1 — Week 1 After Launch

Days 1–7

■ Trial status banner (days remaining, colour-coded)	Billing UX	High
■ Trial expired full-screen page	Billing UX	High
■ Welcome email: professional template	Comms	High
■ Fix owner dashboard: remove dev panels, show business metrics	UX	High
■ 7-day trial warning email	Comms	High
■ 2-day trial warning email	Comms	High
■ Payment failed email + in-app page	Billing UX	High

Phase 2 — Weeks 2–4 After Launch

Days 8–30

■ Billing page: plan status, next payment, manage button	Billing UX	Medium
■ Plan limit upgrade modals (not generic errors)	UX	Medium
■ AppSumo code redemption page (/redeem)	Billing	Medium

■ Store switcher: polished dropdown for multi-store users	UX	Medium
■ Subscription status shown in HQ admin panel per store	Admin	Medium
■ Support contact link inside the app	Support	Medium
■ Password reset flow tested and confirmed working	Auth	Medium
■ Ownership transfer flow built and tested	Auth	Medium

Phase 3 — Month 2

Days 30–60

■ HQ dashboard: real MRR, churn rate, trial conversion chart	Admin	Medium
■ HQ: impersonation with 3-layer safety protocol	Admin	Medium
■ Store activity log: every action logged with user + timestamp	Audit	Medium
■ Custom permission overrides per staff member	Roles	Medium
■ Onboarding tour with driver.js (the dimmed walkthrough)	UX	Medium
■ Empty state screens with helpful CTAs	UX	Low
■ Franchise admin role: multi-branch consolidated view	Roles	Low
■ Shift supervisor role: void approvals, session management	Roles	Low

Phase 4 — Month 3 (AppSumo Ready)

Days 60–90

■ 5+ real paying customers with testimonials	Marketing	Must have
■ AppSumo application submitted at sell.appsumo.com	Marketing	Must have
■ Deal page copy: headline, features, screenshots, FAQ	Marketing	Must have
■ AppSumo code bank imported (bulk CSV upload tool in HQ)	Billing	Must have
■ Stacking logic: 1 code Starter, 2 codes Growth, 3 codes Business	Billing	Must have
■ LTD plan type in database (no expiry, 2 years hosting)	Billing	Must have
■ Support ticket system (basic: email-based or Crisp chat)	Support	Must have
■ Dead account cleanup command (delete cancelled accounts after 60 days)	Infra	Must have

Phase 5 — Month 4–6 (Scale)		Days 90–180
■ HR module: attendance, leave, payroll hours	ERP	Medium
■ Sales executive role: pipeline, quotations, commission	Roles	Medium
■ Inventory controller role: dedicated stock dashboard	Roles	Medium
■ Full support ticket system (routing, SLA, departments)	Support	Medium
■ Marketing manager role: blog CMS in HQ	Admin	Low
■ Platform finance officer role: MRR reporting	Admin	Low
■ Multi-server deployment (when Hostinger is not enough)	Infra	Low
■ Cloudflare R2 migration (if not done at launch)	Infra	Medium
■ Laravel Telescope for debugging (dev only)	Dev	Low
Phase 6 — Month 6–12 (Moat Building)		Days 180+
■ Kitchen manager role: KOT system for restaurants	Industry	Low
■ Pharmacy dispenser role: batch/expiry legally required	Industry	Low
■ Production supervisor role: BOM consumption tracking	Industry	Low
■ WooCommerce sync: move to real-time webhooks (not polling)	Integration	Low
■ Shopify integration	Integration	Low
■ API access tier (Business plan): OAuth + developer portal	Platform	Low
■ Tier 3 placeholder: wholesale partner stub tables	Platform	Low
■ Mobile app for POS (Flutter — 51-screen plan already exists)	Mobile	Low

→ The Numbers That Tell You Where You Are

Milestone	What it means	When you'll hit it
First paying customer	The product works. You have proof.	This week
5 paying customers	Enough for AppSumo application	Week 2–3
\$500 MRR	Server + email costs covered. You're not losing money.	Month 2
AppSumo launch	\$8,000–\$25,000 in 2–3 weeks. Your hiring fund.	Month 3–4
\$3,000 MRR	Your costs + your salary covered by the business.	Month 4–6
First support hire	You stop doing support. You build features instead.	Month 5–6
\$8,000 MRR	You hire a part-time developer. You own the roadmap.	Month 8–12

■ The One Thing That Matters Today

Stop building. Stop planning. Deploy what you have. Get one real person to pay you money for it. Everything in this document — the trial banners, the billing pages, the HQ dashboard — becomes obvious what to build next once you have a real customer telling you what they need. You have a working product. Ship it today.
